

# Manub Gold Project – Sudan Stage I

## 2 Tonne Modular Elution Circuit & Gold Room

### Project

Manub Gold Project Sudan Stage I

### Location

Northern Sudan

### Client

Managem International

### Commencement Date

October 2010

### Practical Completion

February 2011

### Description

Como Engineers were engaged to supply a 2.0 tonne manually operated Pressure Zadra Stripping System with integral goldroom.

Based on Como's existing modular elution assemblies, the system was constructed in Perth and was pre-tested with a hot temperature run under the supervision of our design engineers prior to it being dismantled with minimum form, and then being containerised and shipped to the project in Sudan.

Commissioning was undertaken on-site in Sudan by one of Como's metallurgical engineers.

### Project Manager

Peter Bentzen
