

Comet Gold Plant Construction

Plant Relocation, Refurbishment and Recommissioning

Project

Comet Gold Plant

Location

Goldfields, Western Australia

Client

Hannans Gold Limited

Commencement Date

1988

Practical Completion

1988

Description

Como Engineers were awarded the contract to relocate the process plant from the Galtee More Gold Mine, Mt Magnet in Western Australia, to construct the new Comet Gold Mine in 2005.

Equipment was relocated in as large units as possible, including the tanks which were transported whole as oversized loads and without requiring cutting up the tanks for transport.

Also supplied was a new carbon regen kiln and gold room equipment, and a complete camp installation with all associated infrastructure.

Relocating the plant presented challenges that are a true example of what Como Engineers can achieve.
