

# Four Mile - Uranium

## Uranium In-Situ Leaching Scoping Study

### Project

Four Mile Uranium Project

### Location

South Australia

### Client

Alliance Resources

### Commencement Date

December 2008

### Description

Como Engineers were requested by Alliance Resources to conduct a Scoping Study on the Four Mile Uranium Insitu Leaching Project.

Como Engineers Pty Ltd and Adelaide Control Engineering formed a joint venture (Como-ACE JV) to provide preliminary design and capital costs for the Four Mile Project. Works included design and costing of the well fields, process plant including resin loading, and precipitation, yellowcake drying and packaging and all associated infrastructure. The scoping study also generated operating costs which were combined with the capital costs, and used as the basis for the financial modelling.
