

Guemassa Gold Plant for CTT

Modular Gold Strip Plant

Project

Guemassa Gold Plant

Location

Guemassa, near Marrakesh, Morocco

Client

Compagnie Tifnout Tigharimine

Commencement Date

April 2009

Practical Completion

September 2009

Description

Como Engineers was engaged by CTT parent company Managem-ona to design, construct and supply delivered a modular 2 Tonne capacity carbon elution plant complete with 150 kg/hr LPG fired horizontal carbon regeneration kiln and containerised Gold Room for their Guemassa polymetallic mine.

The system was constructed in modular fashion, including all piping and electrical systems in Perth, Western Australia and hot commissioned on water to temperature in Perth to test systems, prior to being dismantled.

The modular design allowed for minimal dismantling, with the system fitting 9 40' high cube sea containers. Assembly back on site requiring less than 10 days.
