

Indee Gold Plant Construction

Plant Relocation, Refurbishment and Recommissioning

Project

Indee Gold Plant

Location

Pilbarra, Western Australia

Client

Range River

Commencement Date

2005

Practical Completion

2005

Description

Como Engineers were awarded the contract to relocate the process plants from Mt Cuthbert Copper Plant, North Queensland, and the Temora Gold Plant, NSW, to construct the new Indee Gold Mine in 2005.

Equipment was relocated in as large units as possible, including the tanks which were transported whole as oversized loads and without requiring cutting up the tanks for transport.

Also supplied was a complete new modular gold elution plant including carbon regen kiln, gold room and all gold room equipment.

Relocating the plant to such a remote location in Western Australia from across the other side of Australia, presented challenges that are a true example of what Como Engineers can achieve.
