

Magellan Lead Project

Feasibility Study for Lead Carbonate Process Plant

Project

Magellan Lead Project

Location

Western Australia

Client

Polymetals

Commencement Date

1999

Description

Feasibility Study to determine optimal flowsheet, capital, operating costs and concentrate transportation option for a lead carbonate concentrator for Polymetals. The study included sourcing second hand equipment available for relocation as well as the selection of new equipment and structures sized to suit the plant throughput requirements of 135 tph.

Costs were determined to an accuracy of +/-25%.
