

# Way Linggo Project

## Plant Upgrade

### Project

Way Linggo Gold Project

### Location

South Sumatra, Indonesia

### Client

PT Natarang Mining (Kingsrose Mining)

### Commencement Date

August 2010

### Practical Completion

June 2011

### Description

Offering localised support, our Indonesian based Manager was able to offer a full plant review to overcome bottlenecks constraining plant throughput. It was concluded that with an upgraded SAG Mill and a few minor modifications to the plant, the capacity could increase from its 50ktpa to over 150ktpa.

In order to reduce costs of the plant upgrade a mill was sourced and refurbished here in Perth, Western Australia. Como Engineers were onsite to supervise the installation and assist with the electrical installation, underground power upgrade and detailed design of hopper clarifier.

The Scope of works included:

- Mill expansion by addition of SAG mill
  - Definitive Feasibility Study
  - Detailed design
  - Refurbishment and relocation of mill from Perth, WA to project in Indonesia
  - Supervision of SAG Mill Electrical Installation
- Engineering Support Services
- Detailed design of Hopper Clarifier
- Underground Power Upgrade

**Project Manager** Alisdair Finnie
